The Rev. F. W. Hope exhibited a case of insects recently received from Ezra Downes, Esq., captured in his garden near Bombay, including a new species of *Derbe* and other insects, accompanied by notes on the habits of a species of *Cassida*; another of a *Cercopis*, called the Cow-ant, (from emitting a saccharine fluid which the ants greedily drink,) and on several species of parasitic *Hymenoptera* (including a species of the genus *Elasmus*) reared from the cocoons of a small moth.

The following memoirs were read :--

Continuation of a memoir containing descriptions of New Holland Cryptocephalides. By W. W. Saunders, Esq., F.L.S. &c.

Div. 2. Lateral margins of thorax dentate or uneven.

PRIONOPLEURA, W. W. S. Head vertical; eyes reniform; antennæ as long as or longer than the body, filiform, with the six terminal joints somewhat more robust than the others; thorax subquadrate, with the lateral margins dentate or rugose, and the disc with elevated spaces; scutellum quadrate, elevated behind; elytra rugose. Type Cryptocephalus rugicollis, Gray.

Subdivision 1. Elytra with longitudinal elevated ridges more or less distinct.

- Sp. 1. Prionopleura bifasciata, Hope MSS. Head rufous-brown, black above; antennæ black, with the 2nd, 3rd and 4th joints varied with rufous; thorax rufous-brown, with a black central longitudinal patch, and two lateral lunate ones of black; scutellum black; elytra rufous-brown, deeply punctured with eight somewhat elevated longitudinal ridges, and two broad black transverse bands; femora black, rufescent at base; tibiæ rufescent, with the apex black; tarsi black. Length  $\frac{3}{10}$ ths of an inch.—Hab. New Holland. Mus. Hope.
- Sp. 2. Prionopleura crucicollis, Boisduval. Head chestnut-brown, with a black frontal fascia; thorax rufous-brown, with a transverse black band, produced in front and behind into a short cross; scutellum black, shining; elytra deep rufous-brown, coarsely punctured with five distinct and three less distinct longitudinal ridges, with three short longitudinal black patches at the base, and an irregular transverse black central band less rufous brown; femora with a black streak. Length  $\frac{3}{10}$ ths of an inch.—Hab. New Holland and Van Diemen's Land. Mus. Hope and Westwood.
- Sp. 3. Prionopleura Hopei, W. W. S. Deep rufous-brown; head with a black band and spot; antennæ rather longer than the body; thorax black, with a narrow rufous-brown margin; scutellum black; elytra deep rufous-brown, deeply punctured with eight slightly elevated ridges and two black patches at the base, and a transverse central fascia. Length  $\frac{22}{100}$ ths of an inch.—Hab. Van Diemen's Land. Mus. Hope and Westwood.
- Sp. 4. Prionopleura Crux nigra, Hope MSS. Dark rufous-brown; antennæ with the terminal joint black; thorax with a transverse black central band produced in the middle both before and behind,

forming a cross; elytra with nine longitudinal ridges, the five nearest the suture well-defined, with a narrow longitudinal black streak on the shoulders, and a sickle-shaped patch near the suture extending nearly to the middle of the elytra, and then curving in a transverse direction to the outer margin. Length  $\frac{1}{4}$ th of an inch. —Hab. New Holland. Mus. Hope.

Sp. 5. Prionopleura flavocincta, W. W. S. Head rufous-brown, with a transverse black mark on the hind part of the forehead; thorax bright rufous-brown, with a broad transverse central band, dilated in the middle into a diamond shape; scutellum dark brown; elytra minutely punctured with nine distinct, somewhat elevated ridges, deep rufous-brown crossed by a broad orange band, margined with a black line on each side. Length <sup>2</sup>/<sub>10</sub>ths of an inch. —Hab. New Holland. Mus. Hope.

Continuation of a memoir containing descriptions of new exotic *Lucanidæ*. By J. O. Westwood, F.L.S.

- Lucanus faunicolor, Hope. L. mandibulis magnis porrectis, dente valido ante alteroque pone medium apicibusque serratis, totus supra luteo-fusco-pulverosus; antennis longis; tibiis omnibus inermibus. ♂ Long. corp. cum mand. unc. 1<sup>1</sup>/<sub>2</sub>.—Hab. in Oriente. In Mus. Buquet. An varietas L. metallici, Bdv.
- Q Long. corp. unc. 1.—Hab. ?
  Lucanus sericeus, Hope. L. niger, lateribus latè piceo-castaneis luteo-sericeis; mandibulis brevibus; tibiis anticis extus serratis et 3-dentatis, pronoto in medio angulato. Long. corp. lin. 10.— Hab. in insulâ Javâ.
- Lucanus reticulatus, Buquet MS. inedit. L. mandibulis brevibus, crassis, intus obtuse dentatis; subdepressus; niger, pronoto subquadrato, elytrisque squamoso-reticulatis. Long. corp. lin. 6. Hab. in Novâ Zealandiâ. Mus. Buquet.
- Platycerus origonensis, Westw. (an Pl. securidens, Say?). Pl. chalybæus; elytris violascentibus, mandibulis capite parùm longioribus, versus basin curvatis, dente supero alteroque interno versus apicem armatis, pronoti lateribus marginatis. Long. corp. lin. 6.—Hab. Oregon. Mus. Guérin.

May 6th.-G. Newport, Esq., President, in the Chair.

Mr. J. F. Stephens exhibited a specimen of *Yponomeuta sedilla*, Duponch., a moth new to this country, which he had captured on the 25th of April at Norwood.

Mr. W. W. Saunders exhibited the larva of a Longicorn beetle which was found in casks of gum imported from South America, to which it had proved injurious.

Mr. S. Stevens exhibited specimens of Lytae leucographa, taken in blossoms of sallow at Leith Hill in April. Also specimens of
